TRADECLOUD

TRADECLOUD CORPORATE OVERVIEW

CONTENTS

⊘ TRΛDE CLOUD

TRADECLOUD is a global provider of supply chain systems, services and holistic solutions. With over 15 years' experience in providing our unique supply chain platform and services to the import and export trade sector, we possess the required expertise, skills and knowledge to unlock efficiencies and value throughout all aspects of the supply chain.

The TRADECLOUD solution offering is delivered through a platform called TRADECLOUD and is available in two unique forms that enable importers of any size, sector and complexity to benefit from the power of our import management software and services:

TRADECLOUD ENTERPRISE

Our TRADECLOUD software as a service solution (SaaS model) is delivered using our TRADECLOUD ENTERPRISE system which fully automates, integrates and optimizes the import supply chain. TRADECLOUD ENTERPRISE enables end to end import trade management using a single platform. The platform seamlessly connects the critical import trade activities: buying, merchandise planning, shipping, treasury, finance and accounting

TRADECLOUD REVOLUTION

Our TRADECLOUD fully serviced import trade platform, TRADECLOUD REVOLUTION, includes full management of import transactions from order costing, placement, confirmation and tracking through to management and hedging of foreign exchange risk and optimization of logistics up to warehouse, distribution centre or store delivery. By leveraging our many years of experience, strong relationships and high import volumes, our TRADECLOUD FULLY SERVICED SOLUTION offers an end to end import trade service that including:

• Competitive landed costs per unit of product imported
• Access to competitive trade finance
• Full foreign exchange management

AN INTRODUCTION TO TRADECLOUD

OVERVIEW OF THE SYSTEM

TRADECLOUD ENTERPRISE

Our TRADECLOUD Enterprise system is a unique, cloud-based import trade management platform consisting of comprehensive functionality and integrations across the import supply chain. The platform services import trade and can support imports from anywhere in the world. Import products are costed in local currency and costings include all import related cost lines: Supplier cost, forwarding, freight, clearing, import duty, local transport and all other supply chain costs. The system also includes door-to-door automated logistics management with track and trace and foreign exchange management.
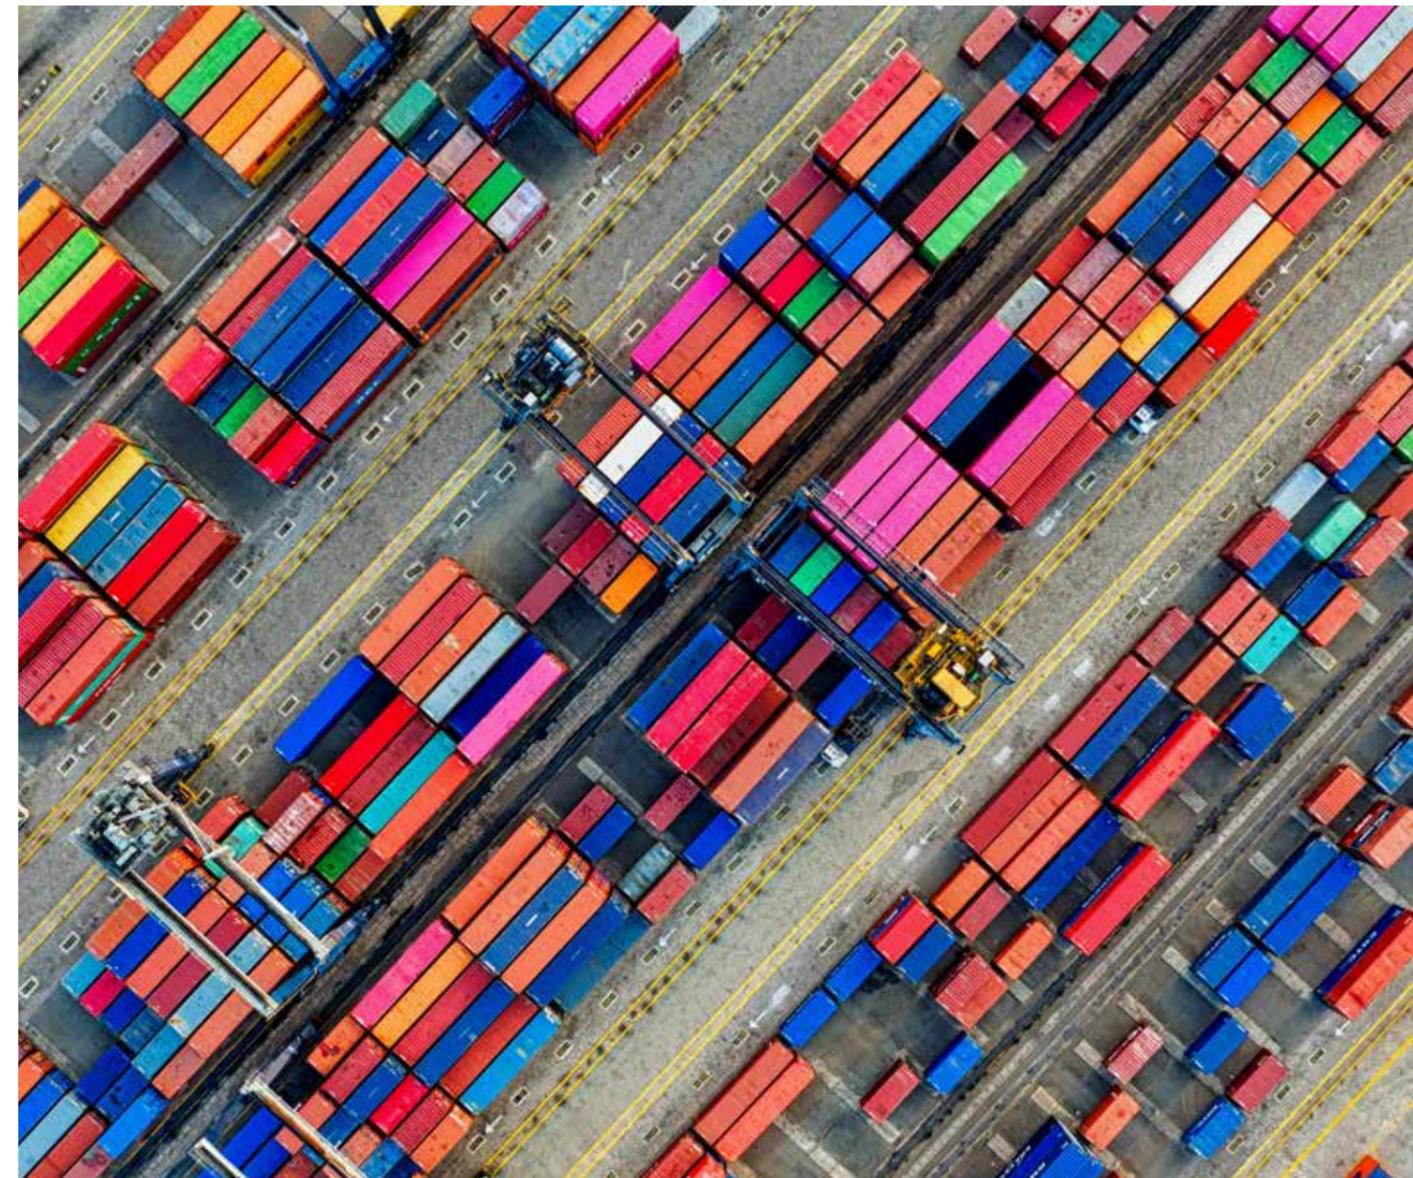

TRADECLOUD Enterprise has standard Webservice integrations to connect seamlessly with all leading Enterprise Resource Planning (ERP) and Financial Systems as well as with Logistics Service Provider systems.

The core value proposition of TRADECLOUD is to:
Provide an integrated platform to service Import Trade Flows
The key components of Tradecloud functionality cover the following import trade activities:
a. Product Sourcing and Buying Support
b. Product Costing and Margin Management
c. Logistics Optimisation and Management
d. Treasury Management and Control
e. Finance and Accounting - Invoice, Payment and Data Automation with systems integration

TRADECLOUD
HIGHLIGHTS

FULLY INTEGRATED AND AUTOMATED PLATFORM
Integrates buying, merchandise planning, shipping, treasury, finance and accounting into one seamless process

FLEXIBILITY AND CONFIGURABILITY
Ability to tailor the solution to fit your business and optimize your business processes

ACCURATE LANDED COSTING
Accurate landed cost per unit for: product selection, order placement, product receipt and stock valuation

360^0 SYSTEM AND SERVICE DELIVERY
Provides for access to a comprehensive range of import services and system functionality

TRADECLOUD HIGHLIGHTS

BUYING

- "What If" costing and planning

- Accurate, flexible and predictive product costing

- Margin management

- Real time supplier communication

SHIPPING

- Real time order tracking

- Supply chain automation

- Electronic document management

- Accurate tariffing

- Accurate logisitcs costing rate and SLA management

TREASURY

- Cash flow and currency management

- Automated creation and update of currency exposures

- Ability to cost using various exchange rates

- FEC management and hedge accounting

FINANCE

- Accurate landed costings

- Integration of actual landed costs (ALC)

- Invoice reconciliation and approval

- Integration of approved invoices and payments

FAQ
WE OFTEN
ENCOUNTER

HOW LONG IS A TYPICAL TRADECLOUD ENTERPRISE IMPLEMENTATION?

If the standard product is implemented and you make use of one of the TRADECLOUD integrated ERP and Finance systems as well as one of the integrated Logistics Service Providers (LSP) the typical implementation time is 8 to 12 weeks. However, if an integration to a new LSP, ERP and Finance system are required, the implementation time can be extended to anything from 12 to 24 weeks depending on the extent, complexity and availability of third parties in relation to the new integrations. Please refer to the list of integrated ERP and Finance systems and integrated Logistics Service Providers available on our website.

WHAT DOES TRADECLOUD ENTERPRISE COST TO IMPLEMENT?

Pricing for the application is dependent on the size and complexity of required integrations as well as the volume of import trade that is likely to flow through the system on a monthly basis. The cost of the Enterprise application comprises a once off implementation, set up and configuration fee as well as a monthly charge. The monthly charge is made up of a base monthly cost for hosting, monitoring, backup and infrastructure support as well as a variable software license and support and maintenance fee which is based on the volume of trade processed on a monthly basis.

MY ORGANISATION WOULD BENEFIT FROM TRADECLOUD ENTERPRISE, WHAT DO I DO NOW?

You can visit our website to find out more at www.outtrader.com. You can also contact us using one of the contact methods on the back page of this brochure and set up a personalized presentation and system demonstration.

IS MY IMPORT DATA SECURE, BACKED UP, ACCESSIBLE AND CONFIDENTIAL?

All data resides in secure databases in the cloud with Amazon Web Services (AWS). The highest possible levels of security and monitoring are applied and access is strictly controlled. All data is backed up and disaster recovery policies are documented and followed. Data and system security tests and audits are done periodically. Confidentiality agreements are signed with all Tradecloud Enterprise clients.

WHERE WE ARE TODAY

+10BN
ANNUAL TRADE FLOWS
Over R10 billion import trade flows through the platform annually

+70%

TRADECLOUD TEAM

MEET THE TRADECLOUD TEAM

DARYL WELLS
Client Solutions and Implementations Director

Daryl is a qualified chartered accountant and CFA with extensive skills and experience in finance, software, solution design and systems analysis and implementation. He has extensive experience in providing supply chain optimization solutions with specific skills in the areas of treasury, buyer requirements, finance and accounting.

CATHRINE VAN DER BANK
Client Account Manager

Cathrine has been a key client account manager and TRADECLOUD implementation lead with TRADECLOUD for over 10 years and has extensive knowledge and experience with the TRADECLOUD platform and its use by corporate import clients, specifically large retailers in Southern Africa. Cathrine's clients include The Foschini Group, The Woolworths Group, Cape Union Mart International, The Clicks Group and more.

JANNELIE MELVILLE
Client Account Manager

Jannelie has been a key client account manager and TRADECLOUD implementation lead with TRADECLOUD for over 10 years and has extensive knowledge and experience in relation to the TRADECLOUD platform and the logistics industry. Jannelie's clients include The Edcon Group, The Libstar Group including Rialto Foods and Cape Herb and Spice, Auto and Truck Tyres and more.

MARIESA DIXON
Business Analysis and Platform Solutions

Mariesa is the TRADECLOUD PLATFORM business and systems analyst and technical solution design expert. She has been with the company for over 10 years and has extensive knowledge of the TRADECLOUD application from a business and technical functionality perspective. She has a BCOM degree in Information Technology and reviews and approves all business and systems specifications for platform enhancements and new functionality.

ANDRIES JANSEN VAN RENSBURG
TRADECLOUD Lead Architect and Developer

Andries has a BSC degree in computer science as well as extensive experience with all the technologies, operating systems and environments behind the TRADECLOUD application. He is one of the original primary systems architects of the TRADECLOUD system with over 13 years' experience designing and developing TRADECLOUD core functionality, integrations and enhancements. Andries also has specific expertise in relation to integrations and tariffing and clearing functionality. He supports, trains and guides more junior and intermediate level developers in the team.

RENDANI MUDAU
TRADECLOUD Lead Architect and Developer

Rendani has a BSC degree in computer science as well as various programming certificates. He has been a senior architect, developer and development team lead on the TRADECLOUD system for more than 10 years. He continues to design and develop system enhancements and solutions for clients and has specific expertise in respect of landed costing and treasury functionality. He also supports, trains and guides more junior and intermediate level developers in the team.

BRILLIANT HLONGWANE
Lead Support Developer

Brilliant has a national diploma and senior certificate in Information Technology and Software Development. He has been the primary support developer on the TRADECLOUD system for over 7 years and has widespread system and troubleshooting knowledge and skills. This enables him to quickly identify, investigate and resolve user or system issues or to re-classify change requests for specification and development.

COBUS MYBURGH
Infrastructure and Network Manager

Cobus is a Cisco certified network associate and has completed a certificate with the Linux Professional institute as well as other courses and certificates. He joined the busines in 2013 as an infrastructure support lead and has since grown to infrastructure manager. He currently manages all TRADECLOUD infrastructure including server administration, hosting, networking, backup and monitoring.
